

Facial Treatment Therapies

Mini Pore & Deep Pore Facials

The mini pore and deep pore cleansing facials are half hour to hour treatments designed to thoroughly clean clogged pores and leave your skin feeling fresh and renewed. These treatments involve cleansing, enzyme peel, steam therapy, extraction and mask therapy. These are primarily for acne and acne-prone patients or other patients not suited for chemical treatment therapies.

Mini Pore & Peel Treatment

The best of both worlds, this 45 minute treatment combines the Biomedic MicroPeel (dermaplaning and chemical treatment) with the Mini Pore Cleansing Facial. Our most requested treatment! It leaves the skin clean and smooth to the touch.

Wax and Tint Services

We offer facial waxing and tint services as an individual treatment or in conjunction with another service.

Makeup Post-Cosmetic Surgery

Complimentary for CEPS Patients

Light Peel Therapies

The Biomedic Micropeel

The MicroPeel or famous “lunch-time” peel is a three step process that removes a micro-thin top layer of skin. The procedure is safe, effective and is accomplished in 15-20 minutes. Benefits include skin clarity, even skin tone, uniform color and better texture and may reduce precancerous lesions. The MicroPeel can be performed on any skin type. Many patients utilize this treatment as a monthly power facial because it dramatically improves the feel of the skin with a quick, inexpensive treatment.

Sensi Peel Treatment

A treatment primarily for extremely sensitive, hard to treat skin including rosacea and ethnic skin types. The solution contains a blend of L-lactic acid and TCA. Plant derived progesterone leaves the skin feeling plump and hydrated. L-ascorbic acid strengthens and brightens the skin while L-arbutin and kojic acid help to treat excess pigmentation and sun damage. Kojic Acid and Azelaic Acid provide anti-acne and antibacterial properties to the solution.

Oxygenating Facial Trio

An antioxidant therapy to ameliorate free radical damage and fight aging. It stimulates respiration and circulation within the skin, promotes healing, and rejuvenates sluggish,

tired skin due to toxins, pollutants, allergens, improper diet and solar damage. Acne conditions also benefit from the increase in oxygen into the epidermis. Ideal when performed in conjunction with another peel or prior to a special event.

Intermediate Peel Therapies

The Micropeel Plus

The MicroPeel Plus is an exceptional skin renewal treatment. It stimulates cell turnover through the application of salicylic acid in the form of microcrystals using MICROSPONGE technology. The treatment takes 15 minutes and will help smooth fine lines and even skin discoloration while simultaneously reducing the appearance of acne scars and environmental damage. The MicroPeel Plus does cause the skin to go through a “shedding” process three to four days after the procedure.

Ultrapeel and PCA Peel

More aggressive exfoliative treatments for oilier, thicker resilient skin types. Will help treat acne, pigment disorders, aging and sun-damaged skin. Moderate to aggressive exfoliation will be experienced depending on the number of coats applied.

Oxy Peel Treatment

An antioxidant therapy to ameliorate free radical damage, this cleansing facial and mask combined with Dermaplaning and Oxy Trio help to stimulate circulation in the skin. It promotes healing, rejuvenated sluggish, tired skin due to toxins, pollutants, allergens, improper diet and solar damage. Acne conditions benefit greatly. A rosy flush and warm sensation to the skin is normal.

Dermafile™

The look of polish perfection is achieved with this stainless steel tool made of finely crushed genuine diamonds that lightly polishes the skin by hand removing the top layer of dead skin cells. Effective on all skin types that have sun damaged skin, scars, acne scarring, fine lines, enlarged and clogged pores. For most skin conditions, a series of six to eight treatments is needed for best results. (A light chemical is added)

IPL

Through the use of our Palomar Intense Pulsed Light system (IPL), our trained Esthetician can erase sun damage on face and body, eliminate unwanted hair and facial veins, and dramatically lessen the redness associated with Rosacea.

Deep Peel Therapy

The Obagi Blue Peel

The Obagi Blue Peel is a more aggressive chemical peel that can dramatically improve your complexion- reducing blemishes, acne scars, wrinkles, uneven pigmentation and sun damage. The Blue Peel is a deeper chemical peel so the results are more dramatic. But, as a result of the depth, it requires more recovery. Depending on the depth of procedure (one to four layers can be applied) healing time can be anywhere from five to ten days. In order to achieve maximum results, patient will be required to begin a preparatory program of products for 2-4 weeks pre-peel. Patients generally are given mild sedation prior to the Blue Peel. A consultation with physician and esthetician is a requirement prior to scheduling.
